

Financial Institutions and System

Week 13 Guest Lecture: FinTech: Evolution and Current State

Igor Vyshnevskyi, Ph.D.

Sogang University, Graduate School of International Studies

May 28, 2026

Agenda

1. Welcome and Session Purpose
2. Guest Speaker Introduction
3. Why This Topic Matters for FIS
4. Lecture: "FinTech: Evolution and Current State"
5. Q&A and Reflection

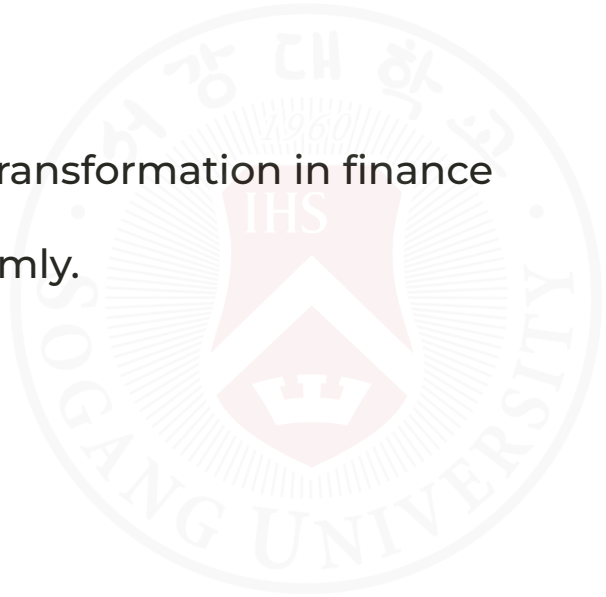

Welcome

It is a privilege to host Professor Cho today.

His perspective combines:

- Academic depth
- Policy relevance
- Practical understanding of digital transformation in finance

Please join me in welcoming him warmly.

Guest Speaker

Professor CHO, Man (조만)

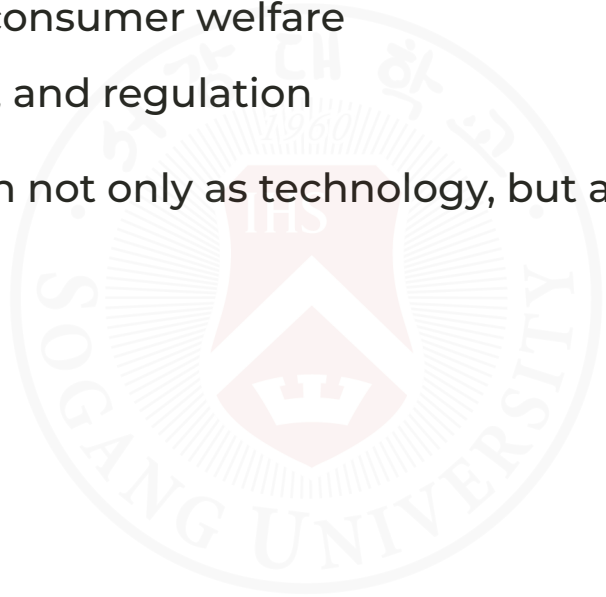

- Visiting Professor, Sogang University
- Emeritus Professor, KDI School of Public Policy and Management
- Ph.D., The Wharton School, University of Pennsylvania
- Research areas: FinTech and Data Economy, Risk Management, Real Estate Finance, Regional Development

Why His Voice Matters

Professor Cho's work connects long-term finance questions with current digital changes:

- How data transforms credit assessment
- Whether digital finance improves consumer welfare
- How innovation affects access, risk, and regulation

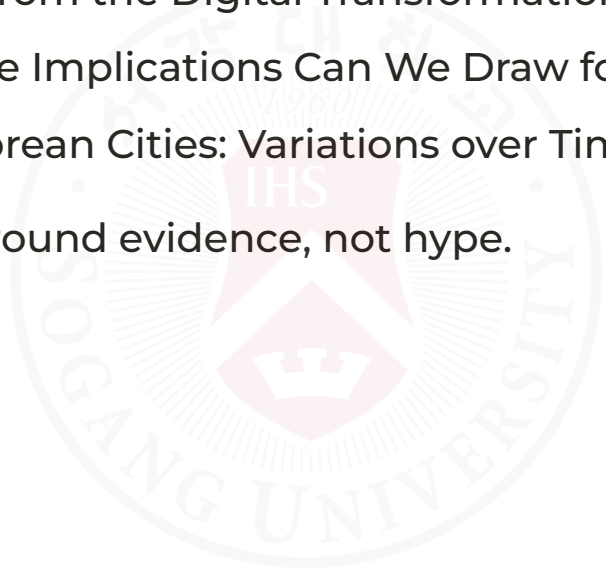

His research helps us evaluate FinTech not only as technology, but as a financial-system transformation.

Selected Work Relevant to Today

- "The Impact of Non-Financial Alternative Data on Credit Risk Assessment" (2023)
- "Data Economy in Korea: Cases of Finance, Real Estate, and Medical Care Sectors" (2023)
- "Did Financial Consumers Benefit from the Digital Transformation?" (2021)
- "FinTech Megatrends: What Welfare Implications Can We Draw for Financial Consumers?" (2021)
- "Housing Demand Elasticities in Korean Cities: Variations over Time and Across Location" (2020)

These studies frame today's lecture around evidence, not hype.

Lecture Focus

FinTech: Evolution and Current State

As you listen, focus on three layers:

1. Evolution

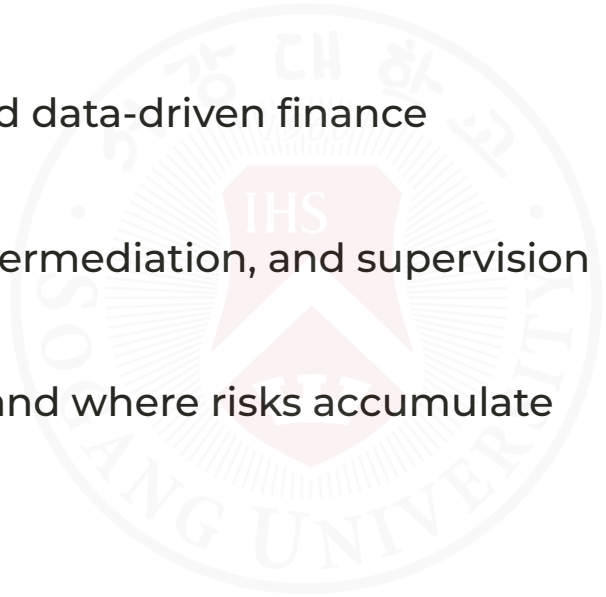

- From digitization to platform and data-driven finance

2. Current state

- Changes in payments, credit, intermediation, and supervision

3. Implications

- Who benefits, who is excluded, and where risks accumulate

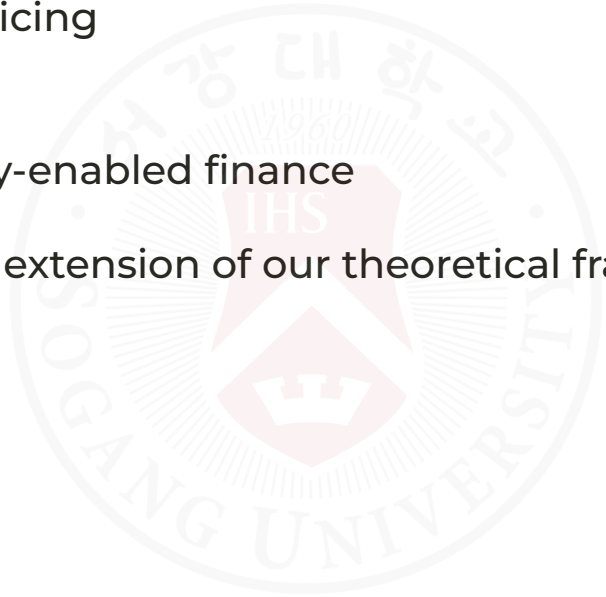

Connecting to This Course

This guest lecture directly supports core FIS themes:

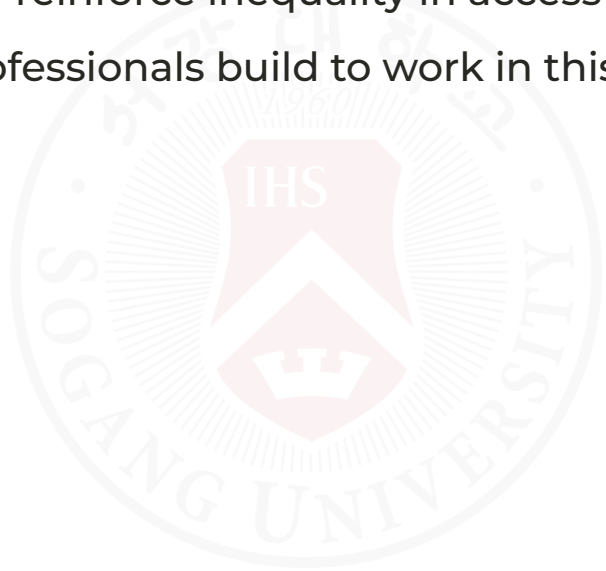

- Financial intermediation and market structure
- Information asymmetry and risk pricing
- Regulation and financial stability
- Consumer protection in technology-enabled finance

Think of today's session as an applied extension of our theoretical framework.

Discussion Prompts for Q&A

1. Which FinTech innovation has the largest system-level impact today, and why?
2. How should regulators balance innovation and stability?
3. Does data-driven finance reduce or reinforce inequality in access to credit?
4. What capabilities should future professionals build to work in this environment?

With Respect and Gratitude

Thank you, Professor Cho, for sharing your expertise with our class.
